

SPACEPLAN FOR END USERS

SpacePlan for End-Users.

SPACEPLAN

END-USERS:

SpacePlan specializes in the design and delivery of effective warehouse storage solutions. We serve medium to large businesses to deliver warehouse fitouts that are functional, fit-for-purpose, and help take your business to the next level.

As you work with us, you will appreciate how our methodical approach produces high-quality designs and seamless integration, every time.

While our proven methods provide reliable results, what sets us apart is our holistic approach to design. Truly successful storage solutions cannot be designed and commissioned without understanding all the other factors that contribute to a warehouse fitout. Traffic management, materials handling equipment, council requirements, and fire compliance must all be considered.

From the start, we engage cross-industry experts to contribute to the design process to ensure that the end result is a warehouse fitout that is functional and fit-for-purpose.

Our success is built on four key pillars:

Quality design and products you can trust -

We believe in bringing in the experts to deliver the best possible storage solutions. This often means engaging with partners in a range of fields such as materials handling, traffic management, fire engineering, and workplace safety.

Your risks identified and managed -

At their core, our processes are design to reduce risk. A key part of this is engaging experts to advise on factors outside of the pallet racking and shelving fitout.

Project management excellence -

Following design, we believe project management excellence is the most important factor for an effective warehouse fitout. We follow our processes to ensure a seamless process from start to finish.

We have "Customers for Life" -

We believe that doing the right thing creates customers for life. This underpins our approach to quality, design, recommendations, and service.

You are running out of Space - Engage us for a SpaceAssessment

If you are running out of space, you should engage us for a SpaceAssessment. These are audits that review your current space utilization and identify opportunities to improve capacity within your existing space. Occasionally, there is no opportunity for us to improve storage capacity but in many cases we have helped customers to improve storage capacity and avoid the distraction and cost of relocating.

- ✓ Improve return-on-investment by getting more out of the same space.
- ✓ Avoid distraction and cost of relocating
- ✓ Improve workflow and productivity

You are assessing new locations - Request a SpaceFit

SpaceFits are a four-page design pack that indicates capacity, potential workflow, high-level costings for budgeting purposes.

When assessing new sites, it can be difficult and time consuming to compare sites and understand if they are a good fit for your requirements. SpaceFits help to streamline the process by providing capacity and workflow concepts for each site. Using these will help you to quickly qualify sites and make an informed decision.

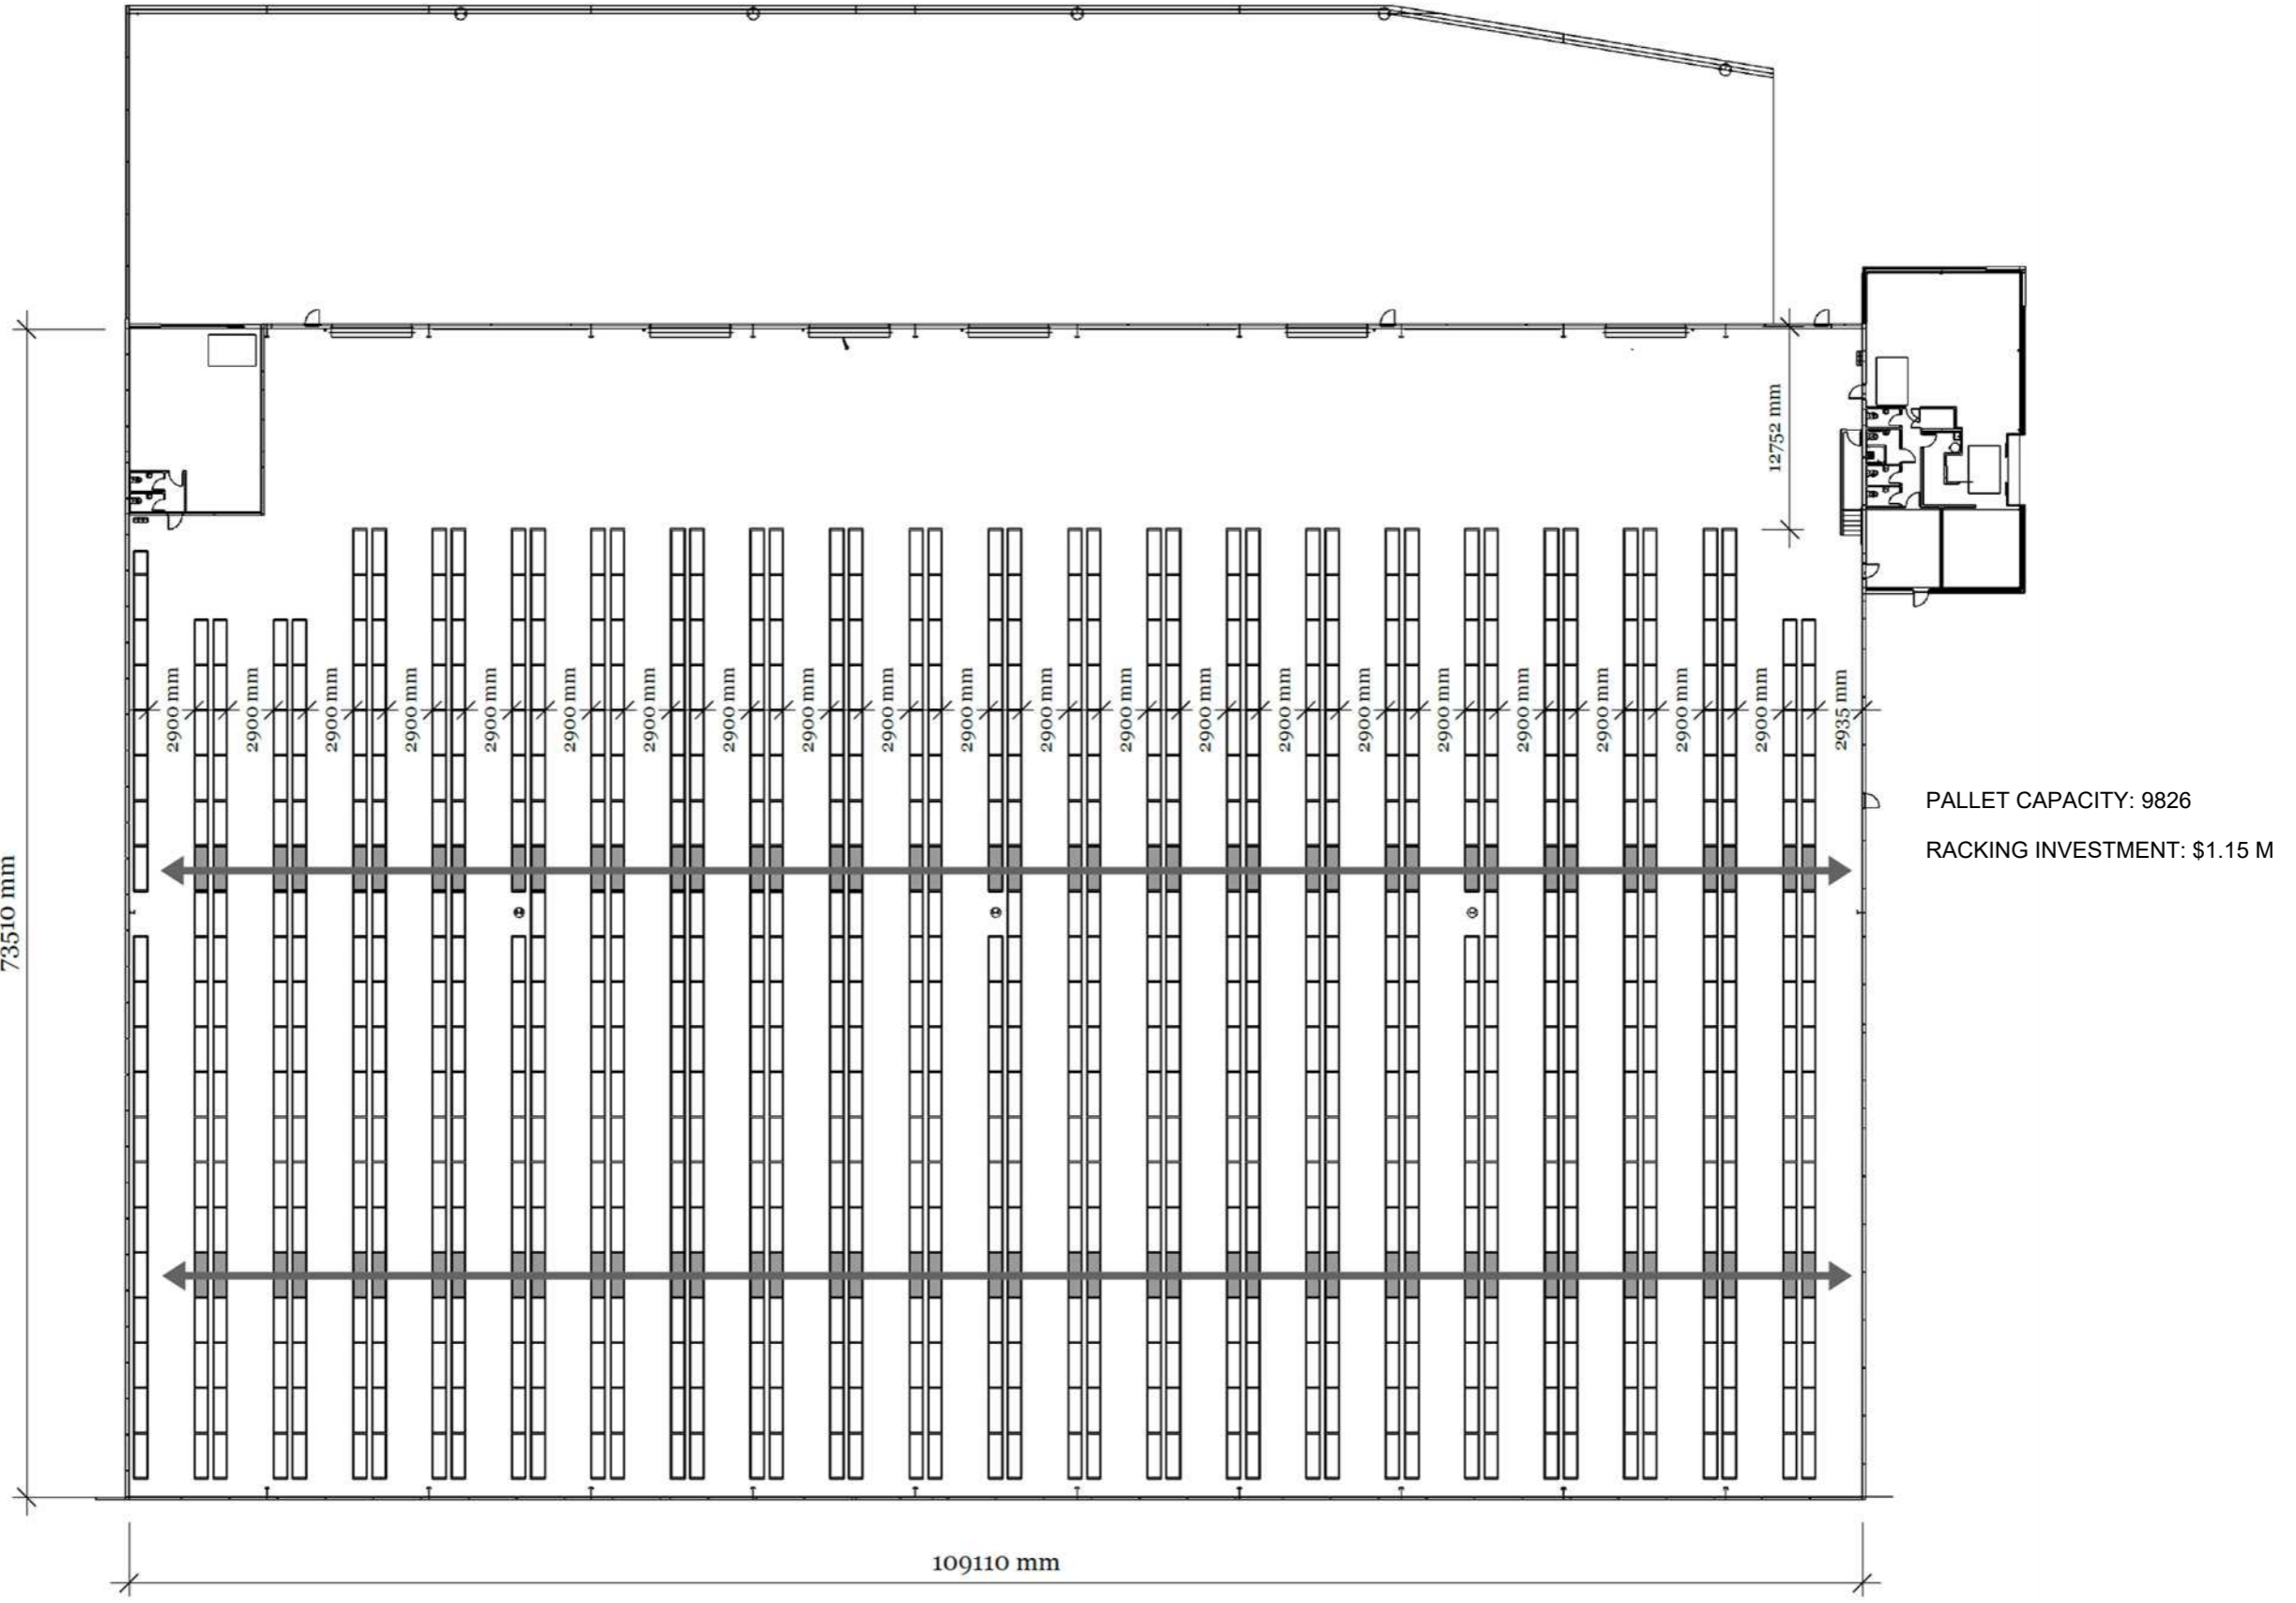

- ✓ Avoid distraction and cost of relocating
- ✓ Improve workflow and productivity
- ✓ Improve workflow and productivity

You are planning a new warehouse - Engage us to Design and Build

Our Design and Build process takes you through the design, installation, and certification for your warehouse storage solution.

- ✓ We engage cross-industry experts to ensure your storage solution functions seamlessly alongside other factors that contribute to a warehouse setup
- ✓ Our thorough processes produce reliable high-quality results
- ✓ We eliminate surprises by proactively identifying and managing risk
- ✓ End-to-end project management with regular reporting gives you confidence that your project is in safe hands
- ✓ We believe in creating customers for life – you can expect to be treated this way
